

Eye Screen Photographic Testing

We at The Vision Store are pleased to provide our patients with an advanced digital retinal testing called Eye Screen. Eye Screen is a high resolution screening photograph of your retina which will help us to document, review, and compare your retina over time. We will use the Eye Screen testing to document a baseline image of your eye, screen for eye diseases, and improve our ability to view your internal retinal health at a much higher resolution than before.

We are concerned about retinal problems such as macular degeneration, glaucoma, retinal holes, detachments, and diabetic retinopathy (all of which can lead to partial loss of vision or blindness). Additionally, many symptoms of systemic diseases such as diabetes and the effects of high blood pressure can be detected by the Eye Screening Photographic Testing. This testing reduces the chance of dilation, however, if a retinal problem is detected most likely the patient will need to be dilated.

You can expect:

- An in-depth view of both retinal surfaces.
- The doctor will review the images with you and it will be part of your permanent record for your file.
- Usually dilation is not necessary however, if a retinal problem is discovered than you may need to be dilated.

Insurance will not cover your eye screen testing. If an eye problem is detected your insurance may cover additional photos.

Dr. Casaus recommends the procedure for all of her patients. We will perform the eye screening photos at a cost of \$35.00.

_____ **I agree** to have my retinal health evaluated with the Eye Screen Testing.

_____ **I Do Not** wish to have the Retinal Photographic Testing. I understand that I will still have a thorough eye examination with dilation.
