

prescribe

IMPROVING MACULAR PIGMENT DENSITY RESULTS IN:

- Protection of the macula from photo-oxidative stress.⁽³⁾
- Reduced progression to blindness from AMD.
- Improved visual performance manifested as reduced glare and improved contrast sensitivity. ^(4&5)

FACTS ABOUT MACULAR PIGMENT

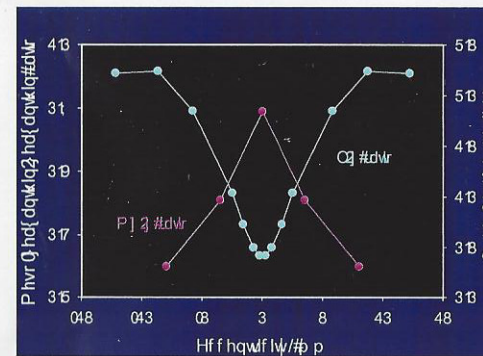

- Uniquely located at the macula.
- Nature's sunglasses. Protects from blue light damage.
- Quenches free radicals acting as a powerful anti-oxidant.^(6&7)
- Composed of three carotenoids: Lutein, Zeaxanthin & Meso-Zeaxanthin
- Meso-Zeaxanthin is concentrated in the center of the macular pigment at the fovea.⁽⁸⁾
- L&Z are concentrated in the peripheral macula.⁽⁸⁾

assess prescribe monitor

Macular Pigment has a "signature" absorption spectra with peak absorption at 460nm.

Thickest in the center and gradually thins out to 6-8 degrees of eccentricity.
